

Thermal Imaging Survey

We have specialist equipment as well as the technical expertise to carry out a full Thermal Imaging Survey of your premises. This can reveal all kinds of potential problems, which can then be repaired during a scheduled shutdown, avoiding breakdown costs and production interruption during busy times.

Potential problems that can be detected include:

- Overloaded Phases
- Unbalanced Phases
- Bad contacts on switches / Circuit Breakers
- Overheating Motors, Gearboxes, Bearings
- Loose or Corroded electrical connections

Your Thermal Imaging Survey will be analysed and a report will be put together, outlining any potential problems and possible solutions. These problems can then be rectified at a time convenient to yourselves.

This service can be vital for industrial premises as well as institutions such as hospitals for whom reliability of electrical supply is an essential factor

Did you know our other services include:

* Generator Installations	* Generator Control Panels	* Switchgear Installations
* All Commercial / Industrial Electrical works	* Electrical Control Panels	* Adapt & Extend Switchgear
* Electrical Installations	* Power Quality Analysis	* UPS Systems
